

# Evolve to the next level...

Tank-type water heater

Lime scale leads to early extinction for tank-type commercial water heaters, and endangers energy-efficiency in the process. In fact, just 1/4" of lime scale in the tank can increase operating costs by 25%!

The Lochinvar® ARMOR™ is an advanced species, with inputs from 150,000 to 500,000 Btu/hr, a 5:1 modulating burner and a condensing heat exchanger. It installs with one or more separate storage tanks, where lime can collect without affecting water heating performance. ARMOR delivers *sustained thermal efficiency* up to 98%, and low operating costs throughout its life cycle.

ARMOR is also designed for easy and flexible installation. Its direct-vent system allows PVC or CPVC air intake and exhaust runs up to 100 feet! And the SMART SYSTEM™ operating control offers everything you need to take system set-up and maintenance out of the Stone Age!

When you compare it to any tank-type heater on the market, you'll agree that ARMOR truly is a natural selection!

**SMART  
SYSTEM™**
