To Whom It May Concern:

We are very excited to announce that The Macomb Group is now the official distributor for Baum lined pipe & fittings for your area. Macomb has been very successful marketing the Baum products in other areas and we look forward to The Macomb Group extending coverage to you. Baum is a worldwide leader in the lined piping industry providing systems with quality levels, features and benefits not common with most other offerings. Macomb and Baum are committed to providing the high level of service and competitive pricing necessary to be your valued supplier. To insure success Baum has over a million dollars of finished goods on the shelf located at the Baum America Factory in West Virginia. In addition, Macomb has significant spool manufacturing capabilities and inventory to meet your immediate needs as well.

Some of our key features and benefits are detailed below...

- Baum PTFE liners are paste extruded. This insures permeation resistance that far exceeds the isostatically molded PTFE products common in the US. This claim is supported by empirical data recorded during independent testing by the Korrosionsinstitutet of Sweden. The paste extruded products also insure a smoother surface that will minimize the opportunity for organics to collect and grow..
- Many of the Baum fittings are upgraded to transfer molded PFA. This is an even higher quality polymer with mechanical properties and permeation resistance that normally come at a much higher price.
- Baum metal housings feature rotating A105 forged steel flanges as standard. Most domestic products charge for a similar upgrade.
- Quality is verified by rigorous testing and assured with insurance company certification. The Pressure Equipment Directive (PED) requires not only requires participation in an ISO quality program but both spark and hydro testing on every part, constant batch testing, permanent marking and total traceability of components.
- Baum America, located outside Charleston WV, is producing spools and special fittings in the US to facilitate a high level of customer service and quality.

Both of us are dedicated to providing excellent service and look forward to servicing you in the very near future.

With Much Appreciation,

Gary Morrison Jr
